FIG. 8 is a block diagram of a system 11 for processing content. The system 11 includes a content source 12, a content processor 13, a content distributor 14, and a content receiver 15. The content source 12 is connected to the content processor 13, which is connected to the content distributor 14, which is connected to the content receiver 15. The content processor 13 includes a content generator 16 and a content distributor 17. The content generator 16 is connected to the content distributor 17, which is connected to the content receiver 15. The content receiver 15 includes a content processor 18 and a content distributor 19. The content processor 18 is connected to the content distributor 19, which is connected to the content receiver 15.

FIG. 13 is a block diagram of a system for content restoration. The system includes a content provider 11, a user device 12, and a restoration server 13. The content provider 11 includes a medium-specific information unit 15, a license information unit 16, and a contents unit 17. The user device 12 includes an individual key generating means 42, a decryption unit 43, a decryption unit 44, a data unit 46, an encryption unit 45, an encryption unit 47, and a restoration unit 73. The restoration server 13 includes a restoration unit 74 and a restoration unit 75. The system also includes an apparatus-specific number unit 82 and a medium unit 83. The content provider 11 provides medium-specific information 15, license information 16, and contents 17 to the user device 12. The user device 12 generates an individual key 42 and performs decryption 43, decryption 44, data 46, encryption 45, encryption 47, and restoration 73. The restoration server 13 performs restoration 74 and restoration 75. The apparatus-specific number unit 82 and the medium unit 83 are also part of the system.
